SUMMARY

DevOps Engineer with 4+ years of hands-on experience in AWS cloud infrastructure, Kubernetes, Terraform, Gitlab, Jenkins, and CI/CD automation. Proven expertise in building scalable deployment pipelines, managing production Kubernetes workloads, implementing Infrastructure as Code, and driving operational excellence through monitoring, incident management, and DevSecOps practices.

PROFESSIONAL EXPERIENCE

DevOps Engineer at Nfinity Solutions

Jan 2025 to Present

- Designed, implemented, and maintained enterprise CI/CD capabilities using Git workflows, Maven, and SonarQube, developing reusable pipeline patterns to improve deployment automation and software delivery consistency.
- Containerized Java microservices using Docker and orchestrated deployments on Kubernetes clusters (EKS), implementing standardized deployment patterns, blue-green and rolling update strategies, and automated rollback.
- Provisioned and maintained cloud infrastructure across AWS and Azure using Terraform (IaC), developing reusable infrastructure modules and standardized environment configurations to ensure consistency, scalability, and governance across development, staging, and production.
- Executed end-to-end release management covering versioning, artifact packaging, CI/CD pipeline execution, release approvals, change-management updates through Jira, smoke testing, deployment validation, and recovery procedures for reliable production rollouts.
- Managed P1/P2 major incidents across platform, cloud, and application layers; led incident bridges, drove root cause analysis through Jira ITSM, supported deployment recovery and rollback activities, facilitated post-incident reviews

Application Engineer at Wipro

June 2022 to July 2024

- Configured and maintained Jenkins CI/CD pipelines integrated with Git via webhooks, automating Maven-based builds, unit testing, artifact generation, and standardized deployments for Java applications across multiple env.
- Provisioned and managed AWS cloud resources including EC2, S3, VPC, and IAM using Terraform, developing reusable IaC configurations and maintaining scalable, governed infrastructure environments aligned with engineering standards.
- Monitored Kubernetes cluster health, application availability, deployment performance, and resource utilization using Prometheus and Grafana, EKS stack, identifying operational bottlenecks and supporting platform reliability and infrastructure optimization.
- Maintained Git branching strategies and release workflows across multiple development teams, ensuring controlled version management, resolving merge conflicts, and supporting consistent software delivery practices.
- Coordinated incident response during critical production outages, supported root cause analysis and deployment recovery, ensured timely stakeholder communication, and contributed to operational improvements and reliable service restoration.

Skills

- Cloud Platform:** AWS (EC2, S3, VPC, IAM, ECR, RDS, SNS, EKS, CloudWatch) and AZURE Cloud
- Containerization & orchestration:** Docker & Kubernetes
- CI/CD and IaC:** Jenkins, GitLab and Terraform
- Security Tools:** SonarQube, Trivy, WAF, TFSec, IAM, SG, Secret Manager
- Version Control:** GIT, GitHub
- Operating System & Scripting:** Red Hat Enterprise Linux, Amazon Linux and Python Scripting
- Deployment Strategies:** Blue Green, Canary and Rolling Updates Deployment.
- Monitoring and ITSM:** Prometheus, Grafana, ELK Stack, Cloud Watch and Incident Management (Jira)
